Strategic and Privileged Location

Located in the heart of the Tambopata National Reserve, Explorer's Inn is more than a lodge: it's a safe, comfortable, and transformative gateway to one of the most biodiverse regions on Earth.

We take you away from urban noise and reconnect you with Peru's most authentic nature - without sacrificing comfort.

The Scientific Tower

Standing 42 meters tall in the heart of the Tambopata National Reserve

It offers unmatched views of the Amazon canopy and the chance to observe macaws and other birds in their natural environment. It is the first structure in the Amazon dedicated to climate change research, equipped with next-generation sensors to monitor carbon emissions and solar radiation.

Night Walk

A Concert Beneath the Stars

Explore the jungle as it transforms at night. With just a headlamp, you'll walk through shadows and sounds—discovering insects, frogs, tarantulas, and, with luck, night monkeys or tapirs. A uniquely sensory experience under the stars and the Milky Way.

Lake Cocococha

Otherworldly Views

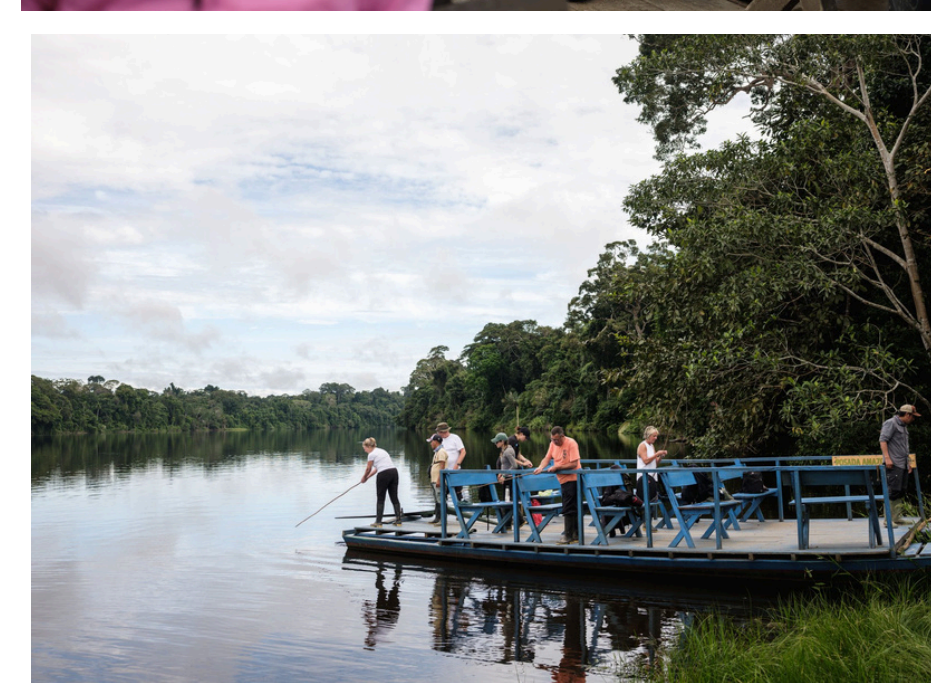

A 5.5 km hike at dawn leads you to Cocococha Lake, ideal for birdwatching. Spot hoatzins, kingfishers, jacanas, macaws, the horned screamer, and—if you're lucky—giant river otters or the rare agami heron. Paddle across the lake, then hike back through the forest discovering new species.

Lake 3 Chimbadas

The Amazon in Full Splendor

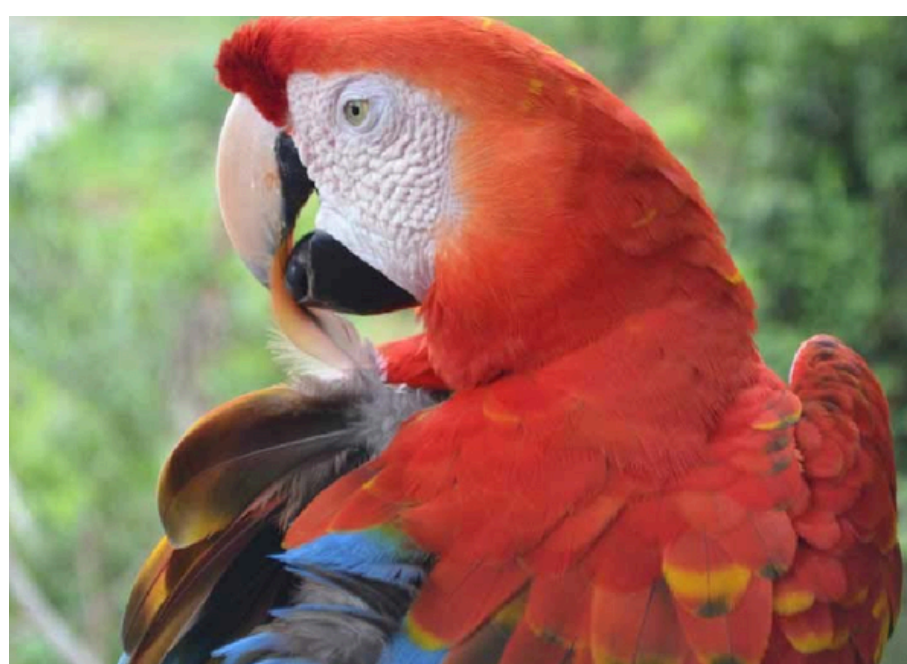

Located in the Infierno Community Reserve, this lake is home to iconic species like giant river otters. Reach it by a 30-minute boat ride and a 2 km walk. Explore the lake on a catamaran and spot black caimans, hoatzins, howler monkeys, and aquatic birds.

Parrot Clay Lick

Jungle Spectacle

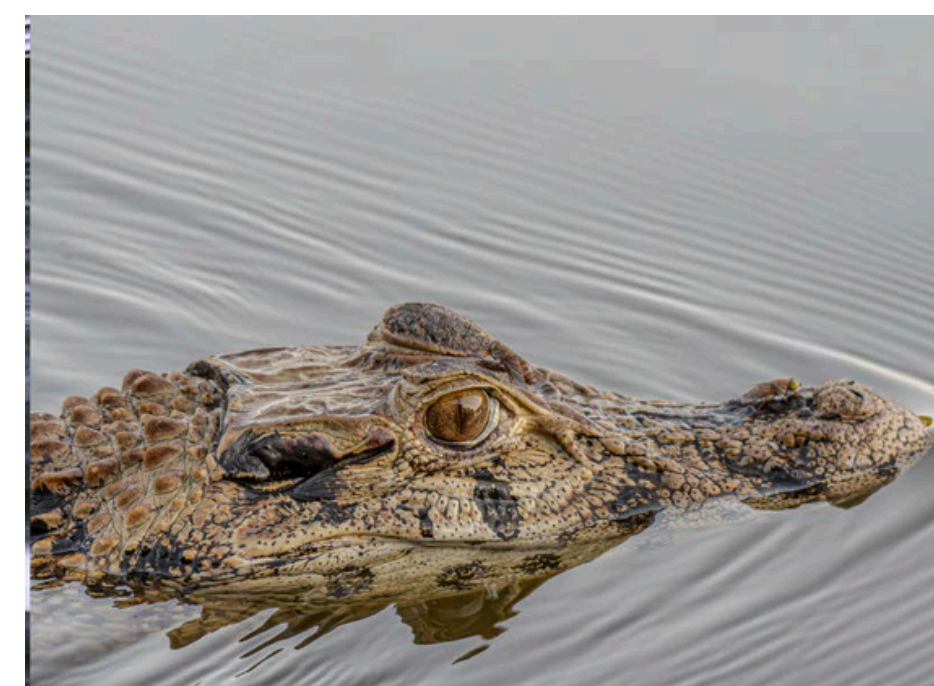

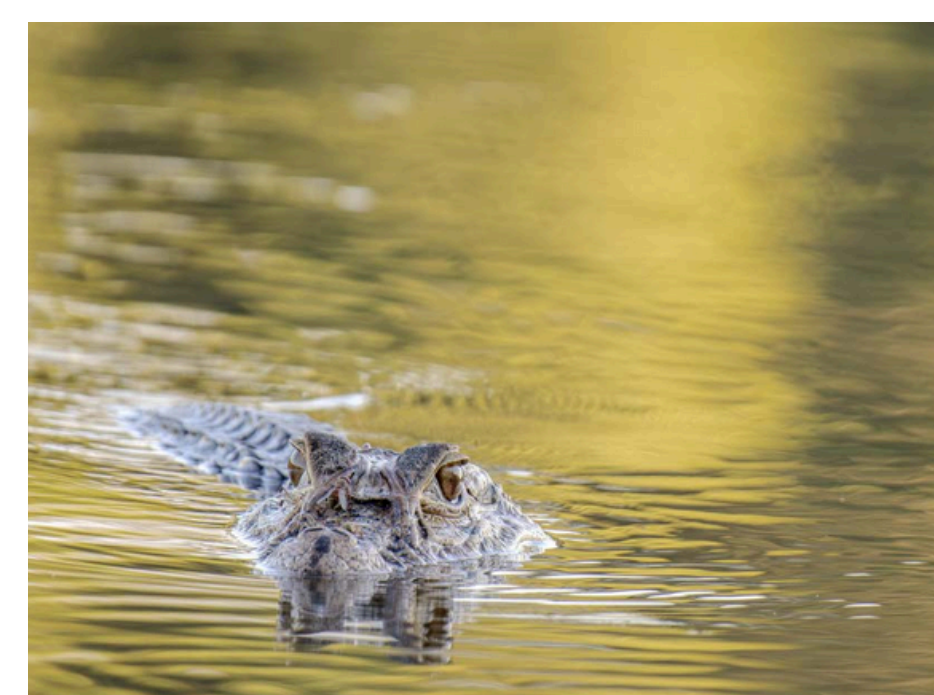

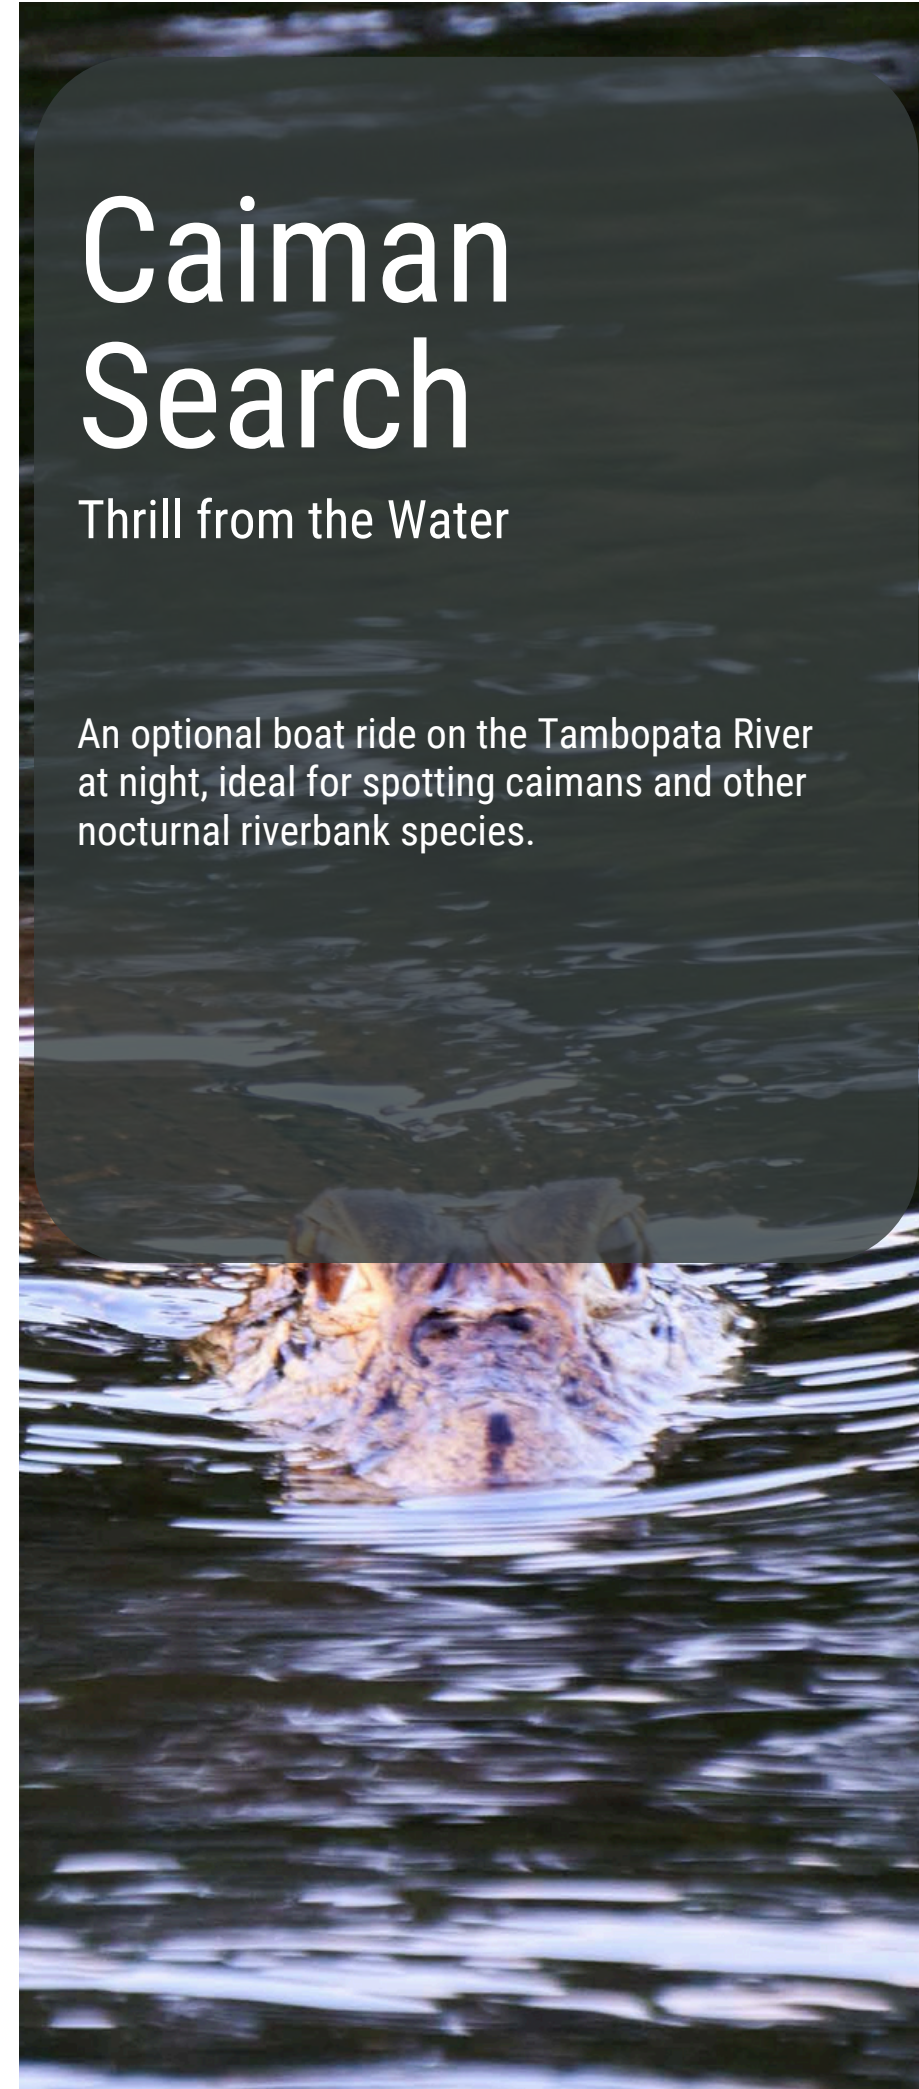

Just 10 minutes by boat from the lodge, then a short walk. Witness vibrant species like yellow-crowned parrots, orange-cheeked parrots, chestnut-fronted macaws, blue-headed parrots, and occasionally scarlet macaws.

Caiman Search

Thrill from the Water

An optional boat ride on the Tambopata River at night, ideal for spotting caimans and other nocturnal riverbank species.

The Story of Max Gunther:

(1925–2018)

Amazon ecotourism pioneer and founder of Explorer's Inn

Born November 25, 1925, in Trujillo, Peru, Max Gunther Doering spent his childhood exploring his family's Hacienda Casa Grande in the Chicama Valley—an early spark for his lifelong fascination with nature. Trained as a veterinarian and a passionate hunter, Max's path took a fateful turn in 1975 when conservationist Pepe Rada invited him into Peruvian Safaris.

By 1976, Max had transformed half-owned hunting grounds into a pioneer of ecotourism: Explorer's Inn. Perched on 105 hectares of untouched Amazon forest near Puerto Maldonado, chosen for its modern airport links to Cusco, he welcomed guests by helicopter to a lodge inaugurated by Peruvian President Morales Bermúdez.

Their surveys revealed world-record levels of bird and butterfly species, leading the government to designate a 5,500-hectare Tambopata Reserved Zone under Peruvian Safaris' stewardship in 1977.

In 1982, under manager Didier Lacaze, Explorer's Inn pioneered community and traditional medicine programs with Infierno village, extending conservation's reach beyond science. Soon after, Max and colleagues launched the Resident Naturalists program, empowering young biologists to guide curious travelers while conducting field research—cementing the Inn's reputation as an Amazon hotspot for discovery.

Despite decades of logistical hurdles in this remote corner of the rainforest, Max's vision endured. Explorer's Inn became both sanctuary and laboratory, inspiring generations of scientists and adventurers. When Max passed on March 4, 2018, he left more than a lodge—he left a legacy of exploration, conservation, and the promise that the greatest journey is the one that connects us back to wild places.

Real Commitment to Research

Since 1979, we have been working with scientific institutions such as the Catholic University of Peru and the Missouri Botanical Garden.

Pontifical Catholic University

Pontifical Catholic University of Peru (AndesFlux network): Studies water balance and carbon flows through Amazonian flux towers.

Missouri Botanical Garden Plots

Missouri Botanical Garden: Installed 5,000+ tree plots from 1979 to 2010 to study forest dynamics and climate change.
